Setting up and managing health plan budgeting

With the Health Plan product for Axiom Budgeting, your organization can budget health plan and insurance costs by calculating revenues and expenses based on Membership Per Member Per Month (PMPM) calculations. You can then use this information to determine the profitability of each health plan and/or insurance product.

Complete the following steps to configure and budget health plans and insurance products in your organization:

NOTE: As you add or retire plans each year, you will need to complete these steps.

- 1. Update the LOCATION, INSCODE, and DATATYPE dimension tables.
- 2. Configure user access and the data filter in the HealthPlan column of the Budget Security Update utility.
- 3. Add or edit plans and the corresponding actual account data into the ACT_HP_20XX table.
- 4. Configure the Membership Enrollment Trend driver.
- 5. Configure the Membership Per Member Per Month (PMPM) driver.
- 6. Open the HealthPlan Operations utility.

Updating dimensions for health plan budgeting

To implement health plan budgeting in your organization, start by making the following changes to the following dimensions:

LOCATION

The LOCATION dimension contains all of the physical locations that have been billed within the organization and is used for monthly reporting and provider-level budgeting. This information is also used for the Axiom Budgeting Health Plan product.

The following table lists all of the options available in this dimension table:

| Column | Description |
|-------------|--|
| LOCATION | The LOCATION used in Axiom Budgeting. This must be an alpha code (i.e. WestClinic). Default should be used as the Location code if this dimension is not being used. |
| Description | Identifies the LOCATION description to be used for budgeting and reporting. |
| KHABgtCode | Used for combining accounts together during budget plan file creation. If there are historical values for two accounts that you want to budget as one combined account, list the surviving account number on both lines. If not combining accounts, this value should match value in the LOCATION column. The default value is NA. |
| KHAInt | Currently no needed for health plan budgeting so the default is NA. |

► INSCODE

The INSCODE dimension stores information for the insurance/health product plans offered by your organization. This information is used to manage and configure the plans included in related driver tables and in the Health Plan Operations utility. Similar to other dimension tables like ACCT, there are column structures to control what insurance plans will be allowed to interface to the HealthPlan tab and at what level of rollup, if any.

IMPORTANT: Use caution when using multi-layer mapping of the plan codes.

The following table lists all of the options available in this dimension table:

| Column | Description |
|-----------------|--|
| INSCODE | The short name or code your organization uses to represent the insurance/health plan product. |
| Description | The long description of the insurance/health plan. |
| InsCode.BgtCode | The code used to group the insurance/health plan products together. For example, grouping all commercial or FFS plans. |

| Column | Description |
|--------|--|
| KHAInt | Specify whether to include the insurance product in the list of available plans in the Health Plan Operations utility. Enter one of the following: |
| | NOTE: The system will allow you to enter any text into this field, however, it only recognizes HealthPlan as the way to add the plan to the interface |
| | HealthPlan - Enter this option to include the product in the list of available plans. |
| | NA - Enter this option to remove the product from the list of available plans. |
| | NOTE: The system will retain historical information for plans removed from the list. |

DATATYPE

The DATATYPE dimension for health plan budgeting purposes is used to load configurable categories for revenues and expenses. Use the Axiom provided default for members. Data imported or entered into the data tables will need to include a valid data type from this table.

NOTE: Version 1 DATATYPE dimension permits DATATYPE.DataType='HP_Members' and DATATYPE.BudgetType IN ('HP_Expense', 'HP_Revenue') - supplied by default data (i.e. one HP_ Members DataType and multiple versions of Revenue and Expense).

The following table lists all of the options available in this dimension table:

| Column | Description |
|-------------|--|
| DATATYPE | The DATATYPE used in Axiom Budgeting and Performance Reporting. This must be an alpha code. |
| | HP_Members - This is a required default for members data. HP_Revenue - This is a recommended default for revenue, but you may use other codes. For example, other types of revenue may be desired to load and recognized as a separate revenue line item. (i.e. HP_ Revenue1, HP_Revenue2). |
| | HP_Revenue - This is a recommended default for revenue, but you may use other codes. For example, other types of revenue may be desired to load and recognized as a separate revenue line item. (i.e. HP_ Revenue1, HP_Revenue2). |
| Description | Identifies the description to be use for budgeting and reporting. |

| Column | Description |
|------------|--|
| BudgetType | Used in related driver tables and in the Health Plan Operations utility. Valid codes will typically be what was used in the Datatype column, however these can be used as a mapping code similar to how KHABgtCode is used in other dimensions. For example, if there are codes used in DataType for Revenue1, Revenue2, and so on but the desired configuration is to map Revenue2 to Revenue1, this column would be used for the mapping. |
| | HP_Members - This is a required default for members data. HP_Revenue - This is a recommended default for revenue, but you may use other codes. For example, other types of revenue may be desired to load and recognized as a separate revenue line item. (i.e. HP_Revenue1, HP_Revenue2). HP_DrugME - This is a recommended default for Drug Medical Expense, |
| | but you may use other codes. HP_HospME - This is a recommended default for Hospital Medical Expense, but you may use other codes. HP_OutPTME - This is a recommended default for OutPatient Medical Expense, but you may use other codes. |
| KHAInt | Used to identify which Datatype categories to use in the related driver tables and in the Health Plan Operations utility. Valid entries include the following: |
| | HealthPlan - Use this code to include the data type. |
| | NA - Use this code to exclude the data type. |
| | NOTE: You may have data you want to record in the actual tables but not necessarily include them for planning purposes. |

Managing the ACT_HP_20XX data table

Overview

The ACT_HP_20XX table stores the actual data used by the HealthPlan Operations utility to budget for your organization's health and insurance plans across entities and departments. This information is used primarily by the Membership Per Member Per Month (PMPM) driver to calculate actual and budget amounts by period by the number of members in a particular period. The table includes the following information for each plan (INSCODE column):

- Department (DEPT)
- Location (LOCATION)
- Data type (DATATYPE) (includes membership numbers and revenue/expense streams)

• Values for periods 1-12 (P1-P12)

NOTE: The following columns are reserved for future use at this time: GROUP, ACCT, NYBKHA, SaveCustom, and SaveTagDocID

You can enter the data in this table manually or as part of an import. Your Kaufman Hall Implementation Consultant will help you set up the table for your organization. There is no pre-defined import available to import health plan data at this time, but you can work with your Kaufman Hall Implementation Consultant to create a custom import.

IMPORTANT: Your organization cannot enter any health plan data containing patient identifying information into the system. Please do not send any transmission of data in any form to Kaufman Hall related to this feature containing any patient identifying information.

NOTE: The Health Plan product relies on data identified in this table for refresh variables and blocks of data. Without the data, refresh variable picklist(s) will display blank. You will need to maintain this table as plans, revenue streams, and expense streams are added or changed. If you need to remove a plan, do not delete it from this table. For instructions, see Removing or retiring plans.

About this table

Note the following before configuring this table:

• This table is only accessible if your organization is licensed for the Axiom Budgeting Health Plan product. Only users assigned the Budget Administrator role profile can access this table.

- Before configuring this table, you will need to do the following:
 - Add or edit insurance or health plan products in the INSCODE dimension.
 - Add or edit the health plan budget data types in the DATATYPE dimension.
 - Add or edit department locations in the LOCATION dimension.

For instructions, see Updating dimensions for health plan budgeting.

Adding or editing plans

To add or edit a plan:

- 1. In the Admin ribbon tab, click System Browser.
- 2. In the Libraries section, click Table Library > Management Reporting > Actuals > Health Plan.

| Libraries | ^ |
|---|---|
| Reports Library | |
| ▼ III Table Library | |
| Dimensions | |
| Budgeting | |
| Comparative Analytics | |
| Costing | |
| DSS | |
| Management Reporting | |
| Management Reporting Actuals | |

3. Double-click the file for the planning year. For example, if you are planning for 2021, double-click ACT_HP_2021.

| Name | Modified | Locked By | Table Type | Classificati | Modified By | Description |
|-------------|-------------------|-----------|------------|--------------|-------------|-------------------------------|
| ACT_HP_2019 | 1/30/2020 3:25 PM | | HealthPlan | Data | | Actuals table for Health Plan |
| ACT_HP_2020 | 1/30/2020 3:25 PM | | HealthPlan | Data | | Actuals table for Health Plan |
| ACT_HP_2021 | 1/30/2020 3:25 PM | | HealthPlan | Data | | Actuals table for Health Plan |

4. Add or edit the following columns for each plan:

| Column | Description |
|---------|---------------------------------------|
| INSCODE | Double-click to select the plan name. |

| Column | Description |
|--------------|---|
| DEPT | Double-click to select the department. |
| LOCATION | Double-click to select the department location. |
| DATATYPE | Double-click to select the data type. |
| GROUP | Reserved for future use. |
| ACCT | Reserved for future use. |
| P1-P12 | Enter the actual or budgeted amount for the period. |
| NYBKHA | Reserved for future use. |
| SaveCustom | Reserved for future use. |
| SaveTagDocID | Reserved for future use. |

5. After making your changes, in the Admin ribbon tab, click Save.

Membership Enrollment Trend driver

Overview

Use this driver to enter enrollment percentages for each health plan or insurance product offered by your organization. The purpose of this driver is to determine the membership trend of each insurance product. The trend percentages are then used in the Membership Per Member Per Month (PMPM) driver to adjust the membership statistics.

TIP: If the membership percentages are provided by the health plan company's actuaries, you can enter those values in this driver.

About this driver

Note the following before configuring this driver:

- This driver is only accessible if your organization has the Axiom Budgeting Health Plan license.
- You must first add/edit insurance or health plan products in the INSCODE dimension table. The system automatically populates the driver with the information from this dimension. The system does not allow you to manually enter plans directly into the driver.
- You must first complete this driver setup before configuring the Membership PMPM driver.
- Only users assigned the GlobalDriverMgmt role profile can access and update this driver.

Access to the data table that stores the health plan records is controlled using the Budget Security Update utility. In the HealthPlan column, you can configure the filter for the health plan data. This column only displays if your organization has an Axiom Budgeting Health Plan license.

| | * Note: This utility only | y adds users to | systems & rol | es. If you need to RI | EMOVE a user from a system or role, You mus | t use the Security Manager. | HealthPlan |

Understanding the interface

The driver displays the list of insurance plans by clearly grouping them together by entity. By default, the list of insurance plans is expanded, but you can double-click \downarrow to expand or double-click \uparrow to contract it. After you save your changes, the system remembers this setting the next time you open the driver.

Membership Enrollment Trend Driver

To remove an entity from the driver, click the **Save** drop-down, and select **Delete**. After you save your changes, the system will remove the entity from the driver.

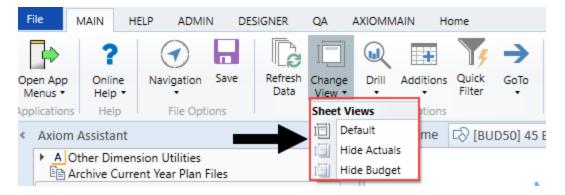

NOTE: This action does not delete the entity from the system. It simply removes the entity from the driver list. To add the entity again, in the **Main** ribbon tab, click **Refresh Data**. You can also press **F9** on your keyboard.

Membership Enrollment Trend Driver

| | | | Actuals 2049 | |
|------------------------------|----------------|------------------|---------------|---------------|
| | Insurance Plan | Description | ACT2049 P1 | ACT2049 P2 |
| | | | | |
| Delete 🗸 🗸 Save Delete | 1 | KH Health System | | |
| | | | | |
| | Commercial | Commercial | 211.0% | 200.0% |

You can view specific parts of the driver from the Main ribbon tab by clicking Change View, and selecting one of the following:

- **Default** Displays both the actuals and budget columns for each period as well as the Projected Actuals.
- Hide Actuals Hides the actuals columns for each period. The projected actuals column remains available.
- Hide Budget Hides the budget columns for each period.

Settings

Complete the following steps to configure this driver:

- 1. In the Bud Admin task pane, in the Budget Assumptions section, do one of the following:
 - To open next year's budget drivers, click Access NY Budget Assumptions.
 - To open this year's budget drivers, click Access CY Budget Assumptions.

| Budget Assumptions | ^ |
|------------------------------|---|
| Access NY Budget Assumptions | |

- Access CY Budget Assumptions
- 2. Double-click 45 Budget HealthPlan Enrollment Trend.
- 3. In the **Refresh Variables** dialog, type the entity number(s) in the field or click **Choose Value** to select the entities, and then click **OK**.
- 4. To display the plans to budget for the entities, in the first column click the Select Option cell, and

select Save.

NOTE: The list that displays populates from the INSCODE dimension table. If you add a plan to the table, the new plan is automatically added to this driver. Removing a plan causes an unmatched records message on the screen. For more information, see Unmatched records below.

- 5. In the actuals columns for each period, enter the actual percentage of growth or reduction of membership that the plan experienced or expect to experience.
- 6. By default, and upon initial use, all Projected Actuals and Budget columns display 100% for all plans. The configured growth or reduction of membership percentages provides the basis for budgeting plan membership for the next budget year. You can change this number, if needed.
- 7. In the **Comments** column, enter any additional information related to the Actual or Projected Actuals columns.
- 8. In the budget columns for each period, enter the percentage of growth or reduction of membership that you expect the plan to experience.
- 9. After making your changes, click Save.

Managing unmatched records (orphan data)

If a plan is removed from the INSCODE dimension table (i.e., a plan is retired or discontinued), an Unmatched Records area displays at the bottom of the driver page. This is often referred to as orphan data. The list of unmatched records means there are plans in the driver table that are no longer valid because of the changes in the dimension table. The system lists the unmatched records and will remove them from the driver table the next time you save.

TIP: The Unmatched Records area displays at the bottom of the driver page, so you may need to scroll to see this information. You can also jump to this section from the Main ribbon tab by clicking **Go To > Unmatched Records**. This option only displays when unmatched records exist. The driver screen will also display a warning message.

Membership Enrollment Trend Driver

NOTE: More unmatched records may occur for other entities in the database, however the system will only delete the plans for those entities you selected in the Refresh Variables dialog.

Membership Per Member Per Month (PMPM) driver

Overview

This driver provides the basis for several important planning activities needed for your organization to budget health plans and insurance products. The system uses the information in this driver to populate the HealthPlan Operation utility.

- Depending on the level of detailed records loaded by your organization in the ACT_HP_20XX data table, the driver can bring in actual data for members, revenues, and expenses by entity, department, insurance code, location, and data type. The driver calculation methods then calculate historical PMPM values based on available history.
- The historical PMPM rates carry forward to any non-actual period. For example, if six months of actual is used, then month seven of the current year in the driver refers to the month six PMPM rate. The rates in all non-actual months can be edited.
- The PMPM rates in the projection and monthly budget columns are then used to calculate the projection and monthly budget for revenues and expenses in the HealthPlan Operations utility.

This driver provides a central location to review member lives, revenue PMPM, and expense PMPM for each health plan and specifically within each entity (or department). The enrollment percentages from the Membership Enrollment Trend driver updates the planned member lives, which also flows to the HealthPlan Operation utility.

About this driver

Note the following before configuring this driver:

- This driver is only accessible if your organization is licensed for the Axiom Budgeting Health Plan product. Only users assigned the GlobalDriverMgmt role profile have access to this driver.
- You must complete the following before configuring this driver:
 - Add or edit insurance or health plan products in the INSCODE dimension. The system does not allow you to manually enter plans directly in this driver because the system automatically populates it with the plans listed in the INSCODE dimension.
 - Add or edit the health plan budget data types in the DATATYPE dimension.
 - Add or edit department locations in the LOCATION dimension.

For instructions on updating these dimensions, see Updating dimensions for health plan budgeting.

- Configure the Membership Enrollment Trend driver before configuring this driver. If the Membership Enrollment Trend driver is not configured, the Membership PMPM driver will default to 100%.
- The system auto populates the driver with data that is stored in the ACT_HP_20XX data table. You can enter the data manually in this table or as part of an import. Your Kaufman Hall Implementation Consultant will help you set up the table for your organization, but you will need to maintain this table as new plans are added.

NOTE: There is no pre-defined import available to import health plan data at this time, but you can work with your Kaufman Hall Implementation Consultant to create a custom import.

• To remove or retire a plan, you cannot delete it from the driver. For instructions, see Removing or retiring plans.

Understanding the interface

The driver makes it easy to view and manage plans by displaying entities and department using a tiered structure that follows this format:

- Entity
 - Department
 - Insurance/Health Plan
 - Location

Data Type

| 2 | | KH Medical Center | | | | | | |
|-------|------|-------------------------------------|---|--|--|--|--|--|
| 27200 | | EMC Radiology - MRI (JobCode) | | | | | | |
| AAF | RP | AARP | | | | | | |
| Ť | HOSP | Hospital_HP | | | | | | |
| | | Members | Previous Input | | | | | |
| | | HP_DrugME | Previous Input | | | | | |
| | | HP_HospME | Previous Input | | | | | |
| | | HP_OutPTME | Default | | | | | |
| | | HP_Revenue | Previous Input | | | | | |
| | | No additional Datatypes available f | No additional Datatypes available for insertion | | | | | |

When you first open the driver, the list of locations is expanded, but you can double-click \pm to expand or

to contract it. After you save your changes, the system remembers this setting the next time you open the driver.

The columns to the right of the listed data types are the actuals columns that display the data stored in the Act_HP_20XX data table. The blue cells allow you to edit remaining projected by month and budgeted values, if needed. By default, the values for the membership row are calculated using the Membership Enrollment Trend driver. The system calculates these values by multiplying the previous month's enrollment numbers by the percentage for the period in the Membership Enrollment Trend driver.

| Per Member Per Month (PMPM) Driver Assession 2 Assession 2 <th< th=""><th></th></th<> | |
|--|----------|
| Businesse Ram Description Tag F1 F2 F3 F4 F5 F7 F8 F9 F1 F11 F12 Projected 1000 1100000000000000000000000000000000000 | |
| Interface Interface <t< th=""><th>Comments</th></t<> | Comments |
| 1/200 OAC Surveys, MR 10x5C4eie AAAB AAB 1/1029 Massaulu9 Member Personalityset Member Record and and and and and and and and and an | connend |

| | |
| | |
| | |
| HP_HospME Previous Input 125:00 125:0 | |
| HP, OutPTIME Default | |
| HP_Revenue Pervious Input 295.00 295. | |

Let's say an organization expects a 10% growth in their membership for period 7. The membership number for period 6 was 88,798. The system multiplies this number by 1.10 for a projected actual of 97,678 members. This calculation continues throughout the blue cells for both actuals and budgeted in the membership row. You can edit this value two ways:

- Adjust the percentage in the Membership Enrollment Trend driver
- Edit the value directly in the actual or budget blue cell in the Membership PMPM driver

NOTE: You can usually get the plan percentages from an actuary at the insurance or health plan company.

| Membe | rship Enrollmen | t Trend Drive | | | | | | |

| | Per Member Per M | Month (PMPM) [| Driver | | | | | |
| | | | | read ACT2 | | ACT2020 | ACT2020 | ACT2020 |
| | Insurance Plan | Description | T | ag P4 | P5 | P6 | P7 | P8 |
| | | | | | | | | |
| | | KH Medical Center | | | | | | |
| | 27200 | KH Medical Center EMC Radiology - MRI (Job | Code) | | | | | |
| | 2 27200 AARP | KH Medical Center EMC Radiology - MRI (Job AARP | Code) | | _ | | | |
| | | EMC Radiology - MRI (Job | Code) | | | | × | |
| | AARP | EMC Radiology - MRI (Job AARP Hospital_HP Members | Defa | | 87,048 87,9 | | 97,678 | 97,6 |
| | AARP | EMC Radiology - MRI (Job AARP Hospital_HP | | ult | 87,048 87,9 45.00 45 125.00 125 | .00 45.00 | 97,678 45.00 125.00 | 97,(45 125 |

The values in the data types from both the actual and budget columns are derived by dividing the data type period value (located in the ACT_HP_20XX data table) by the number of members in the same period. In the following example, the value for hospital medical expenses for this departments plan in period 6 is \$11,099,749. The system divides this amount by the number of members, in this case 88,798 and calculates the expense as \$125 per member. The Membership Enrollment Trend driver provides a starting point for budgeting your health plan costs for the remainder of the year.

When entering remaining projected and budget values, you can either use the values that are automatically calculated by the system using the Membership Trend Enrollment driver, or you can enter your own custom values. The option you choose is indicated by the Spread Tag column. When entering and saving custom values, the Spread Tag column automatically changes from **Default** to **Previous**

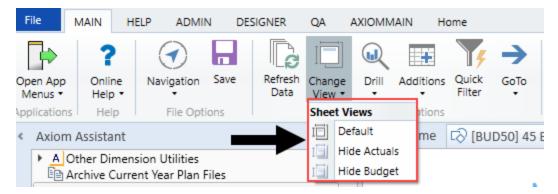

Input. The Previous Input option means that the system stores and retrieves the values from the Membership PMPM driver table versus using the default calculations. Even if you use custom values, you can return to using the driver-calculated values at any time by selecting **Default** from the Spread Tag column.

| 2 | | KH Medical Center | | | | | |

Changing views

You can view specific parts of the driver from the **Main** ribbon tab by clicking **Change View**, and selecting one of the following:

- **Default** Displays both the actuals and budget columns for each period as well as the projected actuals.
- Hide Actuals Hides the actuals columns for each period. The projected actuals column remains available.
- Hide Budget Hides the budget columns for each period.

Settings

Complete the following steps to configure this driver:

1. In the Bud Admin task pane, in the Budget Assumptions section, do one of the following:

- To open next year's budget drivers, click Access NY Budget Assumptions.
- To open this year's budget drivers, click Access CY Budget Assumptions.

Budget Assumptions
 Access NY Budget Assumptions
 Access CY Budget Assumptions

- 2. Double-click 46 Budget HealthPlan Membership PMPM.
- 3. In the **Refresh Variables** dialog, do the following to filter the entities or departments that display in the driver:
 - a. In the **Filter by Entity** field, type the entity number(s) or click **Choose Value** to select the entities, and then click **OK**.
 - b. Optionally, in the **Filter by DEPT.KHABgtMap** field, type the department number(s) or click **Choose Value** to select the departments, and then click **OK**.
- 4. In the actuals and budget columns, do one of the following:
 - To use the default values derived from the Membership Trend Enrollment driver, select **Default** in the **Spread Tag** column (if it is not already selected).
 - To use custom values, type the values in the columns. When you save your changes, the **Spread Tag** column changes from **Default** to **Previous Input**.

TIP: Even if you enter custom values, you can go back to using the default values by selecting **Default** from the **Spread Tag** column. The system will automatically use the values calculated using the Membership Enrollment Trend driver. After you save your change, the system will change the spread tag from **Previous Input** back to **Default** to indicate that these are driver-calculated values.

For more information on how the spread tags work, see Understanding the interface in the section above.

5. After making your changes, click **Save**.

Adding data types

To add a data type:

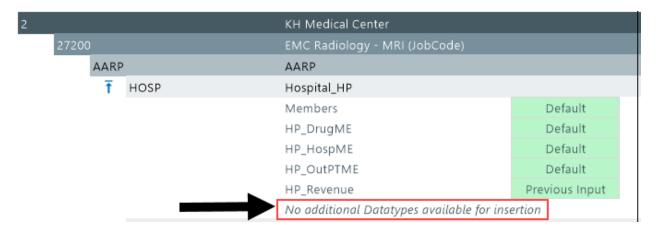

1. In the list of data types, double-click Double click to Add New Datatype.

NOTE: The purpose of this option is to allow you to add a revenue or expense category that contains no actual history. For example, if the AARP health plan does not contain drug expense historically, but now we wish to include it for planning, this option will accommodate that expense category.

| 2 | | | | KH Medical Center | | | | | | |
|---|-------|------|---|----------------------------------|----------------|--|--|--|--|--|
| | 27200 | | | EMC Radiology - MRI (JobCode) | | | | | | |
| | AARP | | | AARP | | | | | | |
| | Ť | HOSP | | Hospital_HP | | | | | | |
| | | | | Members | Default | | | | | |
| | | | | HP_DrugME | Default | | | | | |
| | | | | HP_HospME | Default | | | | | |
| | | | | HP_OutPTME | Default | | | | | |
| | | | • | HP_Revenue | Previous Input | | | | | |
| | | | | Double click to Add New Datatype | | | | | | |

- 2. In the Select Datatype field, type the name of the data type or click Choose Value to select the data types.
- 3. Click OK.

Because you can only add one instance of a data type, the list of available data types diminishes as they are added to the driver for a particular location. If all the data types have been used, then the message **No additional Datatypes available for insertion** replaces **Double click to Add New Datatype** at the bottom of the list.

Deleting data types

After you select the data types to delete, the system does not remove them until after you save the driver.

To delete a data type:

1. Next to the name for each data type to delete, click the Save cell drop-down, and select Delete.

| | | | | | | | |

2. In the Main ribbon tab, click Save.

What if there are no members in a plan?

New plans will likely have no members or historical information in the system, but you can still use this driver to manually enter membership numbers and begin the health plan budget process. In this situation, the membership row displays **Members Not Found** and the system displays zeroes in the white cells of the actual period columns. However, in the blue cells, you can manually enter member numbers and revenue/expense stream values, as needed.

TIP: Instead of entering the new plan information in this driver, another option is to simply enter this same data in the ACT_HP_20XX table. The system will then pull in the data from the table as the starting point for the new plan.

Security utilities

These reports are designed for budget balance sheet calculation and deductions modeling to post the results to the database.

Accessing these utilities

The utilities listed in this section are located in \Axiom\Reports Library\Budgeting Utilities\Security. For instructions, see Browsing the Report Library.

You can also access them from the Bud Admin task pane. In the Budget Reporting section, click Budget Utilities > Security.

Budget Driver Security Update

Use to update the Driver security settings and filters for Admin users who have access to update driver files.

- To sort, group, or search by any of the columns, click the drop-down arrow next to the column label.
- To open a report, select it from the list, and click **OK**.

The system includes many different reports, but you can search through them more easily by using the following search functionality:

1. Click the down arrow beside the **Document Name** column header.

2. In the Group By box, type a search value, and click OK.

The system will display the reports that include the value you entered in the report name.

Removing or retiring plans

As new plans are added for your employees or for your service area, you may need to retire old plans from the system. We do not recommend deleting plans from the ACT_HP_20XX data table. Instead, open the INSCODE dimension table, and in the KHAInt column, type NA. After you save the dimension, the system will remove the plan from the Health Plan drivers as well as the budget plan files while still retaining the plan history.

| Data Type | String | String | String | String |

Budgeting health plans

The HealthPlan Operations utility allows your organization to calculate revenues and expenses based on Membership Per Member Per Month (PMPM) calculations, which you can then use to determine the profitability of each health plan and/or insurance product.

TIP: The ability to determine profitability depends on the data provided by your organization. The more revenue and expense data you enter into the system, the closer you can get to a true margin ratio.

This utility is primarily for Axiom Budgeting administrators and/or finance liaisons of health plan companies and their key stakeholders.

The following list and image describe the different areas and functions of the utility:

- a. Key Results Summary Summarizes the results of all the health plans included in the utility.
- b. Insurance Plans Displays a list of all the health plans and their key metrics for members as well as the PMPM rates for revenue and expenses. The system calculates historical PMPM values for historical periods such as Last Year Actual and Year-to-Date. Projection and monthly budget values are calculated based on members multiplied by the PMPM rate for revenues and expenses. The header bar for each entity/department displays the entity and department number, the insurance plan product, and the location. For each entity/department, the system shows the number of covered members, the revenue, and the expenses.
- c. **Annual Comparison and Budget** The first half of the sheet displays the Annual Comparison section, which shows values for the current year, including the current fiscal year budget, YTD actuals, and projected actuals and next year budget. The other half of the sheet is the Budget section, which shows the monthly and total budgeted values for the next fiscal year.
- d. Expand/Contract entity/department rows By default, the list of entities/departments is expanded, but you can double-click ↓ to expand or double-click ↑ to contract it. After you save your changes, the system remembers this setting the next time you open the driver.

IMPORTANT: The utility does not allow your organization to enter any health plan data containing patient identifying information.

To budget health and insurance plans:

1. In the Bud Admin task pane, in the Budget Files Administration section, double-click Open HealthPlan Utility.

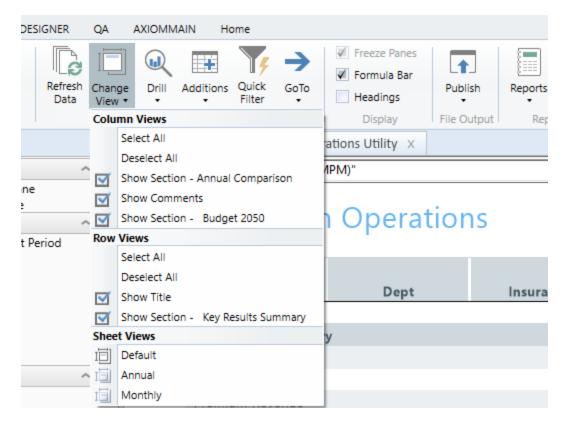

- 2. In the **Refresh Variables** dialog, do any of the following to filter the list of records that display in the utility, and click **OK**:
 - In the Filter by ENTITY field, enter or select one or more entities.
 - In the Filter by DEPT.KHABgtMap field, enter or select one or more departments.
 - To include all entities and departments, leave the fields blank.
- 3. To enter details for a line item, in the **Comments** column, type information in the blue cells for the appropriate line item.

NOTE: The information in the HealthPlan Operations utility is controlled by a series of dimension tables and drivers. See the Managing utility information section below on how to update information and calculations in the utility.

Using different views

The system provides several different ways to view the sheet information. In the Main ribbon tab, click Change View.

The following table provides a description of the different options.

Column views

| View | Description |
|-------------------------------------|--|
| Select All | Show all Annual Comparison, Comments, and Budget columns |
| Deselect All | Hide all Annual Comparison, Comments, and Budget columns |
| Show Section - Annual Comparison | Hide or show the Annual Comparison columns |
| Show Comments | Hide or show only the Comments column |
| Show Section - Budget | Hide or show only the Budget columns |

Row views

| View | Description |
|---------------------------------------|---|
| Select All | Show both the HealthPlan Operations title and Key Results Summary Area |
| Deselect All | Hide both the HealthPlan Operations title and Key Results Summary area |
| Show Title | Hide or show the HealthPlan Operations title |
| Show Section - Key Results Summary | Hide or show the Key Results Summary area |

Sheet views

| View | Description |
|---------|--|
| Default | Show both the Annual Comparison, Comments, and Budget rows and columns |
| Annual | Show only the Annual Comparison and Comments rows and columns |
| Monthly | Show only the Comments and Budget row and columns |

Managing utility information

The information that displays in the utility comes from several different sources. The following table lists where to update information, as needed:

NOTE: To update dimensions specific for health plan budgeting, see "Updating dimensions for health plan budgeting" in the online help.

| Location | Description |
|---|---|
| LOCATION dimension | Add or edit department locations. |
| INSCODE dimension | Add or edit healthcare or insurance plans. |
| DATATYPE dimension | Assign budget types to plan revenue and expense streams. |
| ACT_HP_20XX table | Add or edit plans and the corresponding actual account data. |
| Membership Enrollment Trend driver | Enter enrollment percentages for each health plan or insurance product offered by your organization. The purpose of this driver is to determine the membership trend of each product. The trend percentages are then used in the Membership Per Member Per Month (PMPM) driver to adjust the membership statistics. |
| Membership Per Member Per Month driver | Review member lives, revenue PMPM, and expense PMPM for each health plan. |

Printing the HealthPlan Operations utility

Axiom Budgeting allows you to save the Annual or Monthly version of the HealthPlan Operations utility as a PDF.

To print the HealthPlan Operations utility:

- 1. Open the HealthPlan Operations Utility.
- 2. In the Main ribbon tab, click Publish > Print > Print This Sheet.
- 3. In the **Print Sheet** dialog, do any of the following:
 - **Print Details** Click the **View/Edit** link to edit print view options, scaling, and header/footer information.
 - **Print Preview** Click the **Print Preview** link to view a preview of the report.
- 4. Next to the sheet name, click the check box for the report to print, and click **Print**.
